# Safety is for life.™

#### **PRODUCT INFORMATION**

# EXPLOSION VENT FOR HIGH TO FULL VACUUM AND PRESSURE CYCLING

# **Applications**

**ODV explosion vent** is used under demanding vacuum to overpressure cyclic operating conditions. Designed for working pressures of up to **80% of static burst pressure.** 

The ODV is ideal for use in applications such as filters with frequent jet-pulse cleaning, high vacuum or suction conveyors. It is **vacuum resistant** and the standard explosion pressure is 0.1 bar at 22 °C (71.6 °F).

**The ODU explosion vent** is ideal for applications that involve pressure cycling but no vacuum. In this version, the vacuum support used on the ODV is replaced by a supporting lower section.

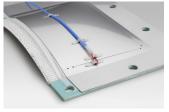

#### Mechanism

When pressure rises, the explosion vent opens at the defined breaking point and releases pressure out of the vessel into the surrounding area.

## Your advantages

- · Low response pressure with full vacuum resistance is possible.
- High working pressure resistance of the explosion vent offers maximum productivity for your processes.
- Triple-section domed construction ensures high-pressure cycling resistance and exceptional service life.
- Round versions and special customised solutions possible.

### **PRODUCT INFORMATION**

# **Installation options**

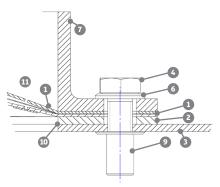

Installation with welded threaded bolts and counterflanges.

- Explosion vent
- Gasket
- 3 Vessel wall (opening dimensions +0/-2 mm)

Installation with flanges and counterflanges.

- Bolt
- 5 Nut
- **6** Washer
- Angular frame

Installation with lock nuts and counterflanges.

- 8 Threaded bolt
- 2 Lock nut
- Edge (r≤2 mm)
- Opening
